basic fibroblast growth factor - short-tailed opossum (Monodelphis of C;Species: Monodelphis domestica
C;Species: Monodelphis domestica
C;Date: 20-Feb-1995 #sequence_revision 20-Feb-1995 #text_change 12-7
C;Accession: S31622
R;Kusewitt, D.F; Sabourin, C.L.K; Budge, C.L.; Ley, R.D.
submitted to the EMBL Data Library, September 1992
A;Description: Characterization of cDNA encoding basic fibroblast g1
A;Reference number: 331622
A;Status: preliminary
A;Molecule type: DNA
A;Residues: 1-164 <KUJGS
A;Cross-references: EMBL: 215154
C;Superfamily: fibroblast growth factor

solidic fibroblast growth factor 1 - rat acidic fibroblast growth factor 1
N;Alternate names: heparin-binding growth factor 1
C;Species: Rattus norvegicus (Norway rat)
C;Date: 28-Feb-1990 #sequence_revision 28-Feb-1990 #text_change 16-Jul-1999
C;Accession: Sol4147
R;Goodrich, S.P.; Yan, G.C.; Bahrenburg, K.; Mansson, P.E.
Nucleic Acids Res. 17, 2867, 1989
A;Title: The nucleotide sequence of rat heparin binding growth factor 1 (HBGF-1).
A;Reference number: Sol447; MUID:89240051
A;Accession: Sol4147
A;Accession: Sol4147
A;Accession: Sol4147
A;Rolecule type: mRNA
A;Residues: 1-155 <GOO>
A;Cross-references: EMBL:X14232; NID:956351; PIDN:CAA32448.1; PID:g56352
C;Superfamily: fibroblast growth factor
C;Keywords: growth factor; heparin binding

   Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Score

Winkles J.A., Friesel R., Alberts G.F., Janat M.F., Liau G.;
"Elevated expression of basic fibroblast growth factor in an immortalized rabbit smooth muscle cell line.";
Am. J. Patbol. 143:518-527(1993).
-!- FUNCTION: THE HEPARIN-BINDING GROWTH FACTORS ARE ANGIOGENIC AGENTS IN VIVO AND ARE POTENT MITOGENS FOR A VARIETY OF CELL TYPES IN VITRO. THERE ARE DIFFERENCES IN THE TISSUE DISTRIBUTION AND CONCENTRATION OF THESE 2 GROWTH FACTORS.
-!- SUBUNIT: MONOMER.
-!- MISCELLANEOUS: THIS PROTEIN BINDS HEPARIN MORE STRONGLY THAN DOES

AGENTS

Kusewitt D.F., Sabourin C.L.K., Sherburn T.E., Ley R.D.;

"Characterization of cDNA encoding basic fibroblast growth facto
the marsupial Monodelphis domestica.";

DNA Cell Biol. 13:540-554(1994)

-I- FUNCTION: THE PEPARIN-BINDING GROWTH FACTORS ARE ANGIOGENIC
IN VIVO AND ARE POTENT MITOGENS FOR A VARIETY OF CELL TYPES
VITRO. THERE ARE DIFFERENCES IN THE TISSUE DISTRIBUTION AND
CONCENTRATION OF THESE 2 GROWTH FACTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    p48798;

RT "Isolation of heparin-binding growth factors from bovine, porcine and

RT canine hearts.";

RL EUR. J. Biochem. 181:67-73(1989).

CC -!- FUNCTION: THE HEPARIN BINDING GROWTH FACTORS ARE ANGIOGENIC AGENTS

CC IN VIVO AND ARE POTENT MITGGENS FOR A VARIETY OF CELL TYPES IN

CC VITRO. THERE ARE DIFFERENCES IN THE TISSUE DISTRIBUTION AND

CC CONCENTRATION OF THESE 2 GROWTH FACTORS.

CC -!- SUBGNIT: MONOMER.

CC -!- SUBGNIT: MONOMER.

CC -I- SUBGNIT: BELLONGS TO THE HEPARIN, ALTHOUGH LESS STRONGLY

THAN DOES BFGF.
